

## Connecting to a Temporary Wireless Hotspot

### Overview

The District has partnered with management of Crossroads of Lee's Summit on Town Centre Blvd to provide a wireless hotspot. Coverage is available outside the front management office. Coverage is strong into the parking area in front of this building.

Please be sure to follow all guidance regarding social distancing when using this resource. We anticipate you should be able to connect from a car in the parking spaces in front of the management office.

### Connecting to the Device

Your Chromebook is already configured and should auto connect to the SSID LSSD\_BUS.

To access your wifi connection status, click the connection icon in the system tray - this is next to the clock and battery information.

For information on working offline in between visits to the hotspot, see the link under "Care/Offline" on the support page below.
